JOVEN[®]
since 1983

Bringing Innovation Home™

Joven has been innovating home technology for over 20 years

The name Joven has been synonymous with instant water heaters ever since 1983. Since our foundation, we have been known as pioneers in the field, constantly introducing new technology and features in our products. We are the first local manufacturer to incorporate many safety standards such as the IP25 Splash Proof protection, EELS Safety Device and conveniences such as 5 Spray Modes, Slider Bar and Electronic Power Control among others. Today, we continue to create products that are highly convenient, reliable and safe.

How does the 880 Series make your life better?

We engineer many technological features into one easy-to-use instant water heater. This means every time you use the 880 Series, you are guaranteed to have better convenience, reliability and safety.

Stepless Electronic Power Control

Joven is the local pioneer of the electronic power control device. Just by simply turning the Temperature Control from 'LOW' to 'HIGH', you can instantly adjust the water temperature to your preference. It is incredibly easy to use and because you are customizing just your exact temperature, you save energy too.

Built-in Booster Pump with Double Ball Bearings

The high efficiency booster pump increases pressure even when the natural gravity tank pressure is low. It operates at a low noise level so that you can always have an invigorating shower.

How does the 880 series provide maximum safety in your bathroom?

Using an electrical device in the bathroom is always hazardous without proper precautions. That is why Joven has created many layers of safety features and failsafe mechanisms that guarantee your safety in your bathroom, such as:

Built-in EELS (Electronic Earth Leakage Sensor)

This device is armed with a 10 mA sensitivity electrical leakage detector. Its function is to disable the device if there is any leakage of electricity within the instant water heater. The device is active at all times and works automatically.

Safety Thermal Cut-out

The Safety Thermal Cut-out's function is to detect if there is any overheating in the heating element. If the heating element ever overheats, the safety thermal cut-out will automatically disable the instant water heater.

Safety Flow Sensor Switch

The Safety Flow Sensor Switch monitors the flow of water into the heater unit. It ensures that there is always sufficient water flow before the heating element is activated. This prevents sudden bursts of extremely hot water that may scald the user.

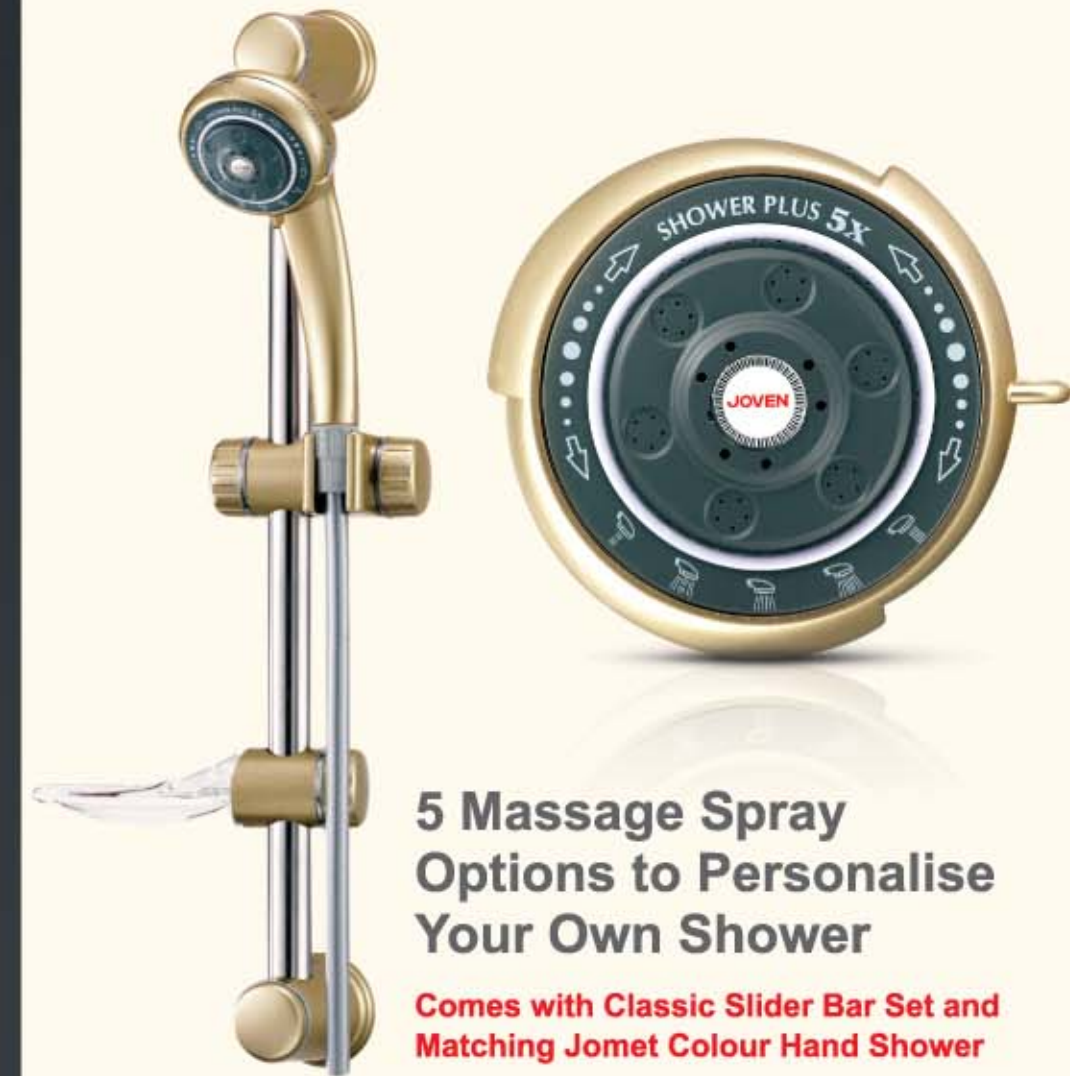

Splash Proof Casing IP25

All of our instant water heater casings are compliant with IP25, one of the highest standards in splash proof technology. It prevents splashes that occurs during shower from penetrating the casing and affecting the electrical circuit inside.

SF (Stop and Filter) Valve

This innovative and compact valve helps control and filter water. This provides the optimal water condition for the instant water heater to give you a more invigorating shower.

5 Massage Spray Options to Personalise Your Own Shower

Comes with Classic Slider Bar Set and Matching Jomet Colour Hand Shower

Massage Jet Spray for a powerful massage

For a nice steady flow of pulsating high pressured water that focuses powerful pressure on your stiff muscles after a tiring day.

Mixed Spray for a refreshing massage

The mixed spray combines the wide spray and massage jet spray mode that allows for the flow of water to gently caress the surrounding muscles while focusing the massage on one part of your body.

Wide Spray for a relaxing shower

Great for those who wants a nice and long shower session. This mode spreads the pressure evenly between many points to ensure a full splashing sensation.

Combo Spray for wide area massage

The combo spray combines the wide spray and dimplex to give you a powerful ring-shaped massage.

Dimplex Spray for a therapeutic massage

This spray mode shoots out 6 streams of water to exert a firm yet comfortable pressure that covers a wider area.
